Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

Priya is analyzing encrypted messages in a research project. She wants to analyze the frequency of each character in a given paragraph. The characters should be stored in a TreeMap so that the output is sorted in ascending order of characters automatically.

You are required to build a Java program that:

Uses a `TreeMap<Character, Integer>` to count how many times each character appears in the message. Ignores spaces and considers only alphabets (case-sensitive). Outputs the frequencies of characters in sorted order.

You must use a TreeMap in the class named MessageAnalyzer.

Input Format

The first line of input contains an integer n, the number of lines in the message.

The next n lines each contain a string (the encrypted message line).

Output Format

The first line of output prints: "Character Frequency:"

Then print each character and its frequency in the format: "<character>: <count>"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2
Hello World
Java

Output: Character Frequency:

H: 1
J: 1
W: 1
a: 2
d: 1
e: 1
l: 3
o: 2
r: 1
v: 1

Answer

```
import java.util.*;
class main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int n= sc.nextInt();
        TreeMap <Character,Integer> freqMap = new TreeMap<>();
        for(int i=0;i<=n;i++){
            String s = sc.nextLine();
            for(char ch : s.toCharArray()){
                if(Character.isLetter(ch)){
                    freqMap.put(ch,freqMap.getOrDefault(ch,0)+1);
                }
            }
        }
    }
}
```

```
    }  
    }  
    }  
    System.out.println("Character Frequency: ");  
    for(Map.Entry<Character,Integer>entry: freqMap.entrySet()){  
        System.out.println(entry.getKey()+" "+entry.getValue());  
    }  
    }  
}
```

Status : Correct

Marks : 10/10
