Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : COD

1. Problem Statement

In a ticket reservation system, you store the available seat numbers in a TreeSet. Users input their desired seat number, and the program checks whether the chosen seat is available.

Using a TreeSet ensures quick and efficient verification of seat availability, ensuring a smooth and organized ticket booking process.

Input Format

The first line of input contains a single integer n , representing the number of available seats.

The second line contains n space-separated integers, representing the available seat numbers.

The third line contains an integer m , representing the seat number that needs to be searched.

Output Format

The output displays "[m] is present!" if the given seat is available. Otherwise, it displays "[m] is not present!"

Refer to the sample output for the formatting specifications.

Sample Test Case

Input: 4

2 4 5 6

5

Output: 5 is present!

Answer

```
import java.util.*;
class p{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int n=sc.nextInt();
        TreeSet <Integer> set = new TreeSet<>();
        for(int i=0;i<n;i++){
            set.add(sc.nextInt());
        }
        int m=sc.nextInt();
        int a=1;
        for(int i: set){
            if(i==m){
                a=0;
                System.out.print(i+" is present!");
            }
        }
        if(a==1){
            System.out.print(m+" is not present!");
        }
    }
}
```

Status : Correct
